SOLENOID VALVE NORMALLY OPEN BSP THREADED CONNECTION

APPLICATION

Solenoid valves are used for applications requiring perfect control of fluid flow.

Area of use: water distribution network, irrigation system, power generation, plumbing industrial washing machines, car wash plants, cooling of machine tools, water jet cleaners, autoclaves, irrigation systems, etc..

Fluids : Clear water, hot water, steam, light oils.
«Do not use for gases and air»

GENERAL CHARACTERISTICS

Range : from DN 1/2" to DN2".

Pilot operated diaphragm valve with low differential pressure.

High flow rate, short reaction time.

Robust and reliable design.

Internal parts (tube, plunger, spring) in stainless steel.

NBR seals (or EPDM on request).

Compatible with most FCDE coils, including ATEX and low power electrical parts and IP67.

Solenoid valves can be mounted in any position. However, it is advisable to install them with the coil in a vertical position above the body.

STANDARDS

Connection	BSP threaded connection according to ISO 228-1.
